FINAL REMOVAL ACTION REPORT, NON-TIME CRITICAL REMOVAL ACTION,
INSTALLATION RESTORATION PROGRAM SITE 11, NASA CROWS LANDING
FLIGHT FACILITY, CROWS LANDING, CALIFORNIA

Dear Ms. Hurst:

Thank you for the opportunity to review the above referenced final document which summarizes the field implementation of a non-time critical removal action at Installation Restoration Program (IRP) Site 11. Consistent with the Final Action Memorandum and Final Project Plans, the goal of the removal action was to "mitigate the exposure risk to the public health, welfare, or the environment posed by the waste at the site." Potential waste streams included hazardous substances in the buried debris and MEC (Munitions and Explosives of Concern) related material. To meet this objective, six Areas of Concern (AOC) within Site 11 required inclusion in the removal action and were addressed accordingly.

In summary, 13,240 tons of waste material and soil were removed from the site and disposed of in an appropriate landfill. Confirmation samples indicated the contaminants of concern were not present at levels above industrial or residential Preliminary Remediation Goals (PRGs). Based on our review of the data presented, and the Navy's response to our comments on the draft document, DTSC agrees with the conclusion no further action is necessary at IRP Site 11 to address impacted soil or groundwater.

However, as stated in the document, the Navy intends to complete MEC verification and clearance at the remainder of IRP Site 11 to ensure that the risk associated with any potential MEC items remaining on the site is removed. As such, communication is currently on-going between DTSC and the Navy in preparation for submittal of the MEC
